SYSTEM-V: A Concept with a System

The Kaiser SYSTEM-V is the consistant implementation of the modular concept to an entire range of enlargers. It is not only characterized by the upgradability to different lighting heads and formats, all the items in the system are compatible with all the units. The complete modularisation of the enlargers is the unmistakable feature of SYSTEM-V. It also permits an enlarger to be assembled from the various system modules to completely suit your individual needs. So you can get a model out of the box or have one tailor-made for you as well.

The hardware side of the SYSTEM-V concept is based on three separate assemblies.

1. The lighting components

The „heads" determine the type of light and beam, the filtration and light mixing features. They decide whether the complete machine is a color or black-and-white enlarger.

2. The format-determinative components

„Format" is defined here as the maximum enlargeable negative format. These components include the condensor system, the inserts for the compound negative carrier, and the enlarger lens. They decide whether the machine is a 35 mm enlarger or a medium-format one for 6 x 6 cm, 6 x 7 cm or 6 x 9 cm.

3. The dimension-determinative components

These include the base board and column and their dimensions – The width times the depth and column height determine the overall machine sizes.

Tools for Picture-Makers

The enlarger is the most important device in the darkroom. But in addition there is a wide range of supplementary tools to make exposing photographic paper easier and more reliable. The basic equipment should at least comprise a safelight for a „safe" basic illumination, a masking frame or easel for holding the photographic paper and a timer to control the exposure time.

Test printer and focus magnifier round off the equipment.

Developing the exposed photo paper requires lab trays (a minimum of three), print tongs, bottles for photo chemicals, graduates and beakers to measure and mix the chemicals, a process timer, a thermometer and a drying rack as basic equipment.

If you also want to do your own film developing, you will also need a developing tank with a self-loading reel, bottles, graduates and funnels for the photo chemicals, a thermometer, a

process timer, film clips to hang up wet films and a pair of scissors.

Some basic knowledge is indispensible – there are many useful books – and some exercise is also needed. For this you will need time. The reward for your efforts are pictures which in their own way are unique and which bear the distinctive hand of their „maker".
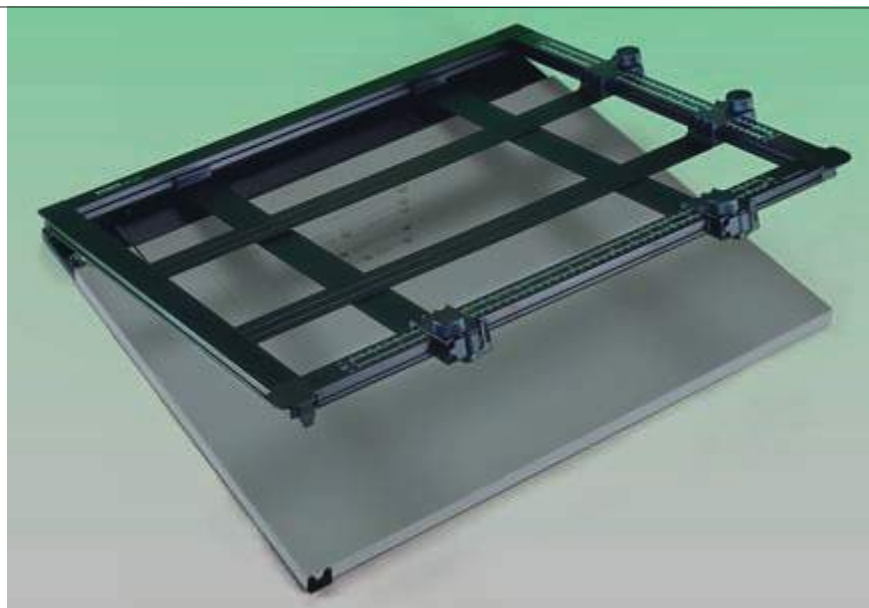

4704-06
